# PLANES

-THE SHAPE OF THINGS TO COME-

AND WELCOME TO THE TWO-DIMENSIONAL  
WORLD OF SHAPES.

A LINE WITH NO BEGINNING AND NO ENDING.  
A LINE IN WHICH EVERY POINT IS EQUIDISTANT  
FROM A POINT AT ITS CENTER.

CIRCLES ENCOMPASS  
OUR LIVES...

A CIRCLE IS CREATED WHEN A LINE WITH AN  
END POINT ROTATES AROUND ITS STARTING POINT.

THE CIRCLE ALSO DEFINES A TWO-DIMENSIONAL  
PLANE.

NOW YOU MAKE A CIRCLE. START WITH SETTING THE POINT OF YOUR COMPASS ON THE GIVEN FOCAL POINT BELOW. SEE IF YOU CAN DRAW THREE CONCENTRIC CIRCLES ON THE DOTTED LINES WITHOUT MESSING UP. (IT'S A LOT HARDER THAN IT LOOKS!)

HINT: YOU'LL FIND IT MORE CONTROLLABLE AND SMOOTHER TO LEAN THE COMPASS SLIGHTLY IN THE DIRECTION OF THE SWING. KEEP MORE PRESSURE ON THE POINT THAN THE PENCIL.

YOU COULD ALSO USE A STRING TO SWING A PENCIL AROUND A PIN.

CONNECTING POINTS WITHIN OVERLAPPING CIRCLES PRODUCE MORE SHAPES IN TWO DIMENSIONS.

TWO EQUAL-SIZED CIRCLES WITH FOCI ON THE RIMS...

GIVE YOU TWO EQUAL-SIZED TRIANGLES WITH EQUAL-LENGTH LEGS WHEN YOU CONNECT THE RIM INTERSECTIONS TO THE FOCI.

ADD A THIRD EQUAL-SIZED CIRCLE.

CONNECTING FOCI TO INTERSECTION POINTS GIVES YOU A SIX-SIDED SHAPE.

GO AHEAD AND TRY SOME  
OVERLAPPING CIRCLE TRICKS FOR  
YOURSELF.

TRIANGLES

HEXAGON

A SIX-PETALED  
FLOWER!

SEE IF YOU CAN MAKE THIS BY  
ADDING SIX CIRCLES TO THE FIRST.

TO LAY OUT A SIX-SIDED WINDOW OR PICTURE FRAME, WE CAN USE THE UNIQUE GEOMETRY OF THE HEXAGON TO MAKE QUICK WORK OF IT.

- ① DRAW A CIRCLE SIZED TO THE DESIRED CIRCUMFERENCE OF THE FRAME.

- ② WITHOUT CHANGING THE COMPASS SETTING, STEP OUT SIX INTERVALS ALONG THE RIM.

- ③ CONNECT THE INTERVAL POINTS.

- ④ DRAW LINES FROM THE FOCUS POINT TO THE RIM INTERSECTIONS. THESE LINES ARE THE ANGLE AT WHICH THE FRAMES JOIN ONE ANOTHER.

- ⑤ USE A BEVEL GAUGE TO RECORD AND TRANSFER THIS JOINT ANGLE.

- ⑥ SET YOUR DIVIDER TO THE DESIRED WIDTH OF THE FRAME (MY EYE LIKES ONE-SIXTH OF THE FACET LENGTH) AND MARK ON EACH RADII LINE.

- ⑦ CONNECT THESE POINTS AND THERE YOU HAVE IT.

YOU CAN MAKE A TEMPLATE FROM A FULL-SCALE DRAWING FOR LAYOUT ON THE STOCK.

CAN YOU COME UP WITH A SIMPLE  
WAY TO LAY OUT A SEVEN-SIDED FRAME?  
TRY IT ON THIS CIRCLE:

THINK OF THE CIRCLE AS NOTHING  
MORE THAN A CURVED LINE. NOW  
THINK ABOUT HOW YOU WOULD  
DIVIDE A LINE INTO EQUAL INTERVALS.

OKAY, THOSE POLYGONS WERE  
PRETTY COOL ... COSMIC EVEN.  
BUT I NEED SHAPES WITH NICE  
RIGHT ANGLED CORNERS TO MAKE  
USEFUL STUFF LIKE BUILDINGS,  
FURNITURE, AND OTHER STABLE  
STRUCTURES.

SO WHAT JOURNEYMAN NEEDS, THEN, IS **A SQUARE.**

THE SQUARE IS A PROFOUNDLY USEFUL SHAPE THAT HAS FOUR EQUAL-LENGTH SIDES, CORNERS THAT ARE EQUI-DISTANT FROM EACH OTHER AND THAT MEET AT RIGHT ANGLES.

SO HOW DO I COME UP WITH A SQUARE?  
THERE WASN'T A TOOL IN MY BACKPACK FOR  
MAKING ONE, WAS THERE?

SNIDELY IS RIGHT - JUST LIKE THE ANCIENTS DID  
MILLENIUM AGO, YOU CAN USE YOUR COMPASS AND  
STRAIGHT EDGE TO "SQUARE THE CIRCLE."

JUST AS OVERLAPPING CIRCLES PRODUCE TRIANGLES, HEXAGONS AND OTHER POLYGONS BETWEEN THEIR INTERSECTION POINTS, THEY CAN ALSO PRODUCE A PERFECT SQUARE.

- ① START WITH A CIRCLE.
- ② DRAW A LINE THROUGH IT.
- ③ DRAW TWO MORE CIRCLES OF LARGER RADIUS CENTERED ON INTERSECTIONS.
- ④ DRAW A LINE THROUGH THEIR RIM INTERSECTIONS.
- ⑤ THEN CONNECT THE INTERSECTIONS ON THE FIRST CIRCLE.

"SQUARE" THIS CIRCLE.

LET'S TAKE A JOURNEY -  
AN ADVENTURE EXPLORING THE  
TOOLS OF OUR IMAGINATION.

YOU'LL BE EQUIPPED  
WITH A WORKING KNOWLEDGE  
OF PLANE GEOMETRY AND  
A SMALL BACKPACK OF  
SIMPLE TOOLS...

... THE SAME COLLECTION OF TOOLS AND KNOW-HOW  
THAT MAKERS USED SINCE ANTIQUITY TO CREATE THE  
WORLD'S FOREMOST ICONS OF STRUCTURAL INTEGRITY  
AND TIMELESS BEAUTY.
